SPRAY-ON SILICONE PRODUCT PROMISES FREEDOM FROM MOISTURE WITH LOW DIELECTRIC FOR INDUSTRIAL APPLICATIONS

January 27, 2005
Short Hills, NJ

Anderson and Associates, LLC and their new Aerosol Division are introducing an exciting new product called AeroCure. It is a unique silicone spray designed for electrical connections that protects against moisture and temperature variances without impeding electrical conductivity. Once sprayed, the material cures to a conformal coating. The thickness of the coating can be built up to as much as twenty five thousandths of an inch with multiple applications. The coating is extremely durable, but can be removed easily if re-entry is required.

Jerry Solomon, Director of the Aerosol Division, explained that the material was originally designed for copper cables used in the Telephone Industry. He went on to say “This new silicone spray can really be used anywhere that wires or cables are joined together and moisture is a concern. It can be used for electrical connections as well as cable connections. It has uses in the Marine Industry, where corrosion is such an ongoing problem, the Cable TV market where connections are often made on the outside of the house, in-premise wiring where connections are subject to weather, and any other application where moisture protection is needed. The beauty of this material is that it can be sprayed on in seconds and in many cases does away with the need for taping.”

Anderson & Associates, LLC manufactures their original line of specialty silicone products at two US plants under the trade name Andisil. They are also partnered with two European silicone specialized companies as their exclusive North American sales agents. This allows them to complete the full range of products they offer to the many industries they serve.

Their technically trained staff and global resources enable Anderson & Associates to rapidly and efficiently deliver the latest in technology and product development, offering the highest degree of personal service and flexibility to meet each customer's requirements.

AeroCure will be available (date, where, etc.) Free samples may be obtained by visiting the web site: <http://www.andisil.com> and clicking on the "AEROCURE" link.
